Q1 Valid anagram : sorting way

```java
import java.util.Arrays;

class Solution {
    public boolean isAnagram(String s, String t) {

        if(s.length() != t.length()) {
            return false;
        }

        char[] s1 = s.toCharArray();
        char[] s2 = t.toCharArray();

        Arrays.sort(s1);
        Arrays.sort(s2);

        return Arrays.equals(s1, s2);
    }
}
```

Q2 :- Contains Duplicate :- HashSet approch

```java
import java.util.HashSet;

class Solution {
    public boolean containsDuplicate(int[] nums) {

        HashSet<Integer> set = new HashSet<>();

        for(int num : nums) {

            if(set.contains(num)) {
                return true;
            }

            set.add(num);
        }

        return false;
    }
}
```

Q3:- Two sums :- hashmap approach

```
class Solution {
    public int[] twoSum(int[] nums, int target) {
        HashMap<Integer,Integer> map = new HashMap<>();
        for(int i =0;i<nums.length;i++){
            int cmp = target - nums[i];
            if(map.containsKey(cmp)){
                 return new int[] {map.get(cmp),i};
            }
            map.put(nums[i],i);
        }
        return new int[0];

    }
}
```
